objects/Mouse.php

Setting the global variable $DEBUG above the class declaration will provide significant feedback above the webpage's Title Bar and a small amount of feedback in the Message Area below the Menu Bar. If $DEBUG is set at a higher order (eg. std/page.php), the small amount of feedback in the Message Area will also be generated.

As an example:

ATTRIBUTE: seq= Array ([isa] => int
  Read/Writable? = 1
  Initialize Value =
  Attribute Object ([key] => seq [vals] => Array [name] => [read_writable] => 1 [isa] => integer [trigger] => [doc] => [type] => string [subtype] => Array

Verb is set? 1 (count)
Attribute exists? 0 (lms_audit)
